Panarchy chart: a fictional example

Stochastic Parrots and Beyond · adapted from Liberating Structures

> ! Fictional example
>
> The department, the notes, and the priorities are invented for teaching. Do not copy the levels: you discover your own.

What the example shows

The chart on page 2 shows a completed Panarchy chart with three priorities.

- **Priority 1, department level:** nobody owns the guidance on AI use. A fast level waits for a slow one.
- **Priority 2, university level:** the licensed chatbot has no documentation of its training data, so disclosures stay vague.
- **Priority 3, vendor level:** license terms restrict what users can document.
- **Upward:** a disclosure template from the department can become university policy.
- **Downward:** a legal duty to document training data supports stricter procurement.
